**ABSTRACT**

*The purpose of this study was to evaluate organizational structure, administrative frame-work and facilities of Sports in Central Prison of Bareilly in Uttar Pradesh, India. The sample of the present study was drawn randomly from the jail administrators, prisoners and physical educator(s) of Central Prison of Bareilly. The size of the sample was 56 comprising 50 prisoners and 6 administrators. No physical educator(s) was found in the jail. Questionnaire taken for the study was developed by the researcher in a pilot study. It includes three sub-scales (a) Organizational Structure, (b) Administrative Frame-work, (c) Facilities of Sports. The percentile method was used in the analysis of the results. The data indicate that some of the inmates' information intended to continue their sports involvement following their release whereas some of the administrators recorded their responses to prescribe the Government of India for the proper sports facilities in their jail. Many of the inmates would rather watch sports events on television rather than participate in one themselves.*
